

1. How your project will benefit from React

- What will React Native allow you to do that would have been difficult with React?
 - React Native allows for building apps which can be downloaded from an app store and used natively on a mobile device, where as React is for building websites which are adapted to mobile device views. React Native allows for writing mobile apps in components and Javascript without needing to learn a new language like Java.

2. Expected List of React Native Components

- About us: information about convention, goals, etc.
- Contact us: contact information and information about attractions and lodging
- Guest info: information regarding guests and promotions at the convention
- - Header and Footer: header/ for navigation if necessary in React Native. We'll be going over this in the future of the module.

3. Team responsibilities

- This page will be continuing as a solo project.
